El Retiro como unidad de medida en TVE: el cachondeo en redes está servido

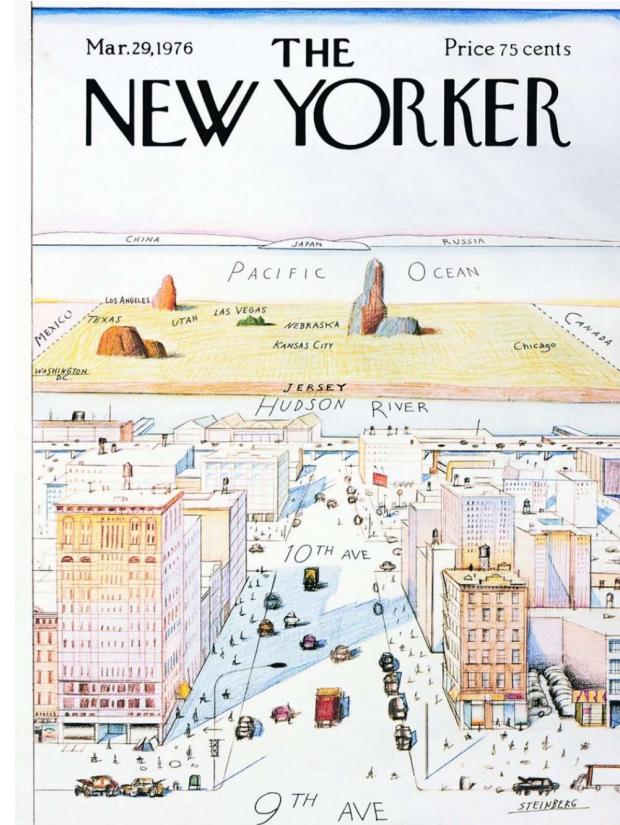

La televisión pública recurre a la superficie del parque madrileño para ilustrar sobre la cantidad de magma que podría salir del volcán de La Palma

Smart Citizen

The screenshot shows the Smart Citizen app's main dashboard for Madrid, Spain. At the top, there are navigation icons for MAP, COMMUNITY, and SEARCH. A 'GET YOUR KIT' button is also visible. On the left, a 'Filters' sidebar is open, showing a '# Tags' section with a dropdown menu. The main area features a map of Madrid with various monitoring stations marked by yellow circles. One station, 'IES Marqués de Suanzes SCK 2.1', is highlighted with a yellow box, showing it was last updated 5 minutes ago. Below the map, a summary of current data is displayed:

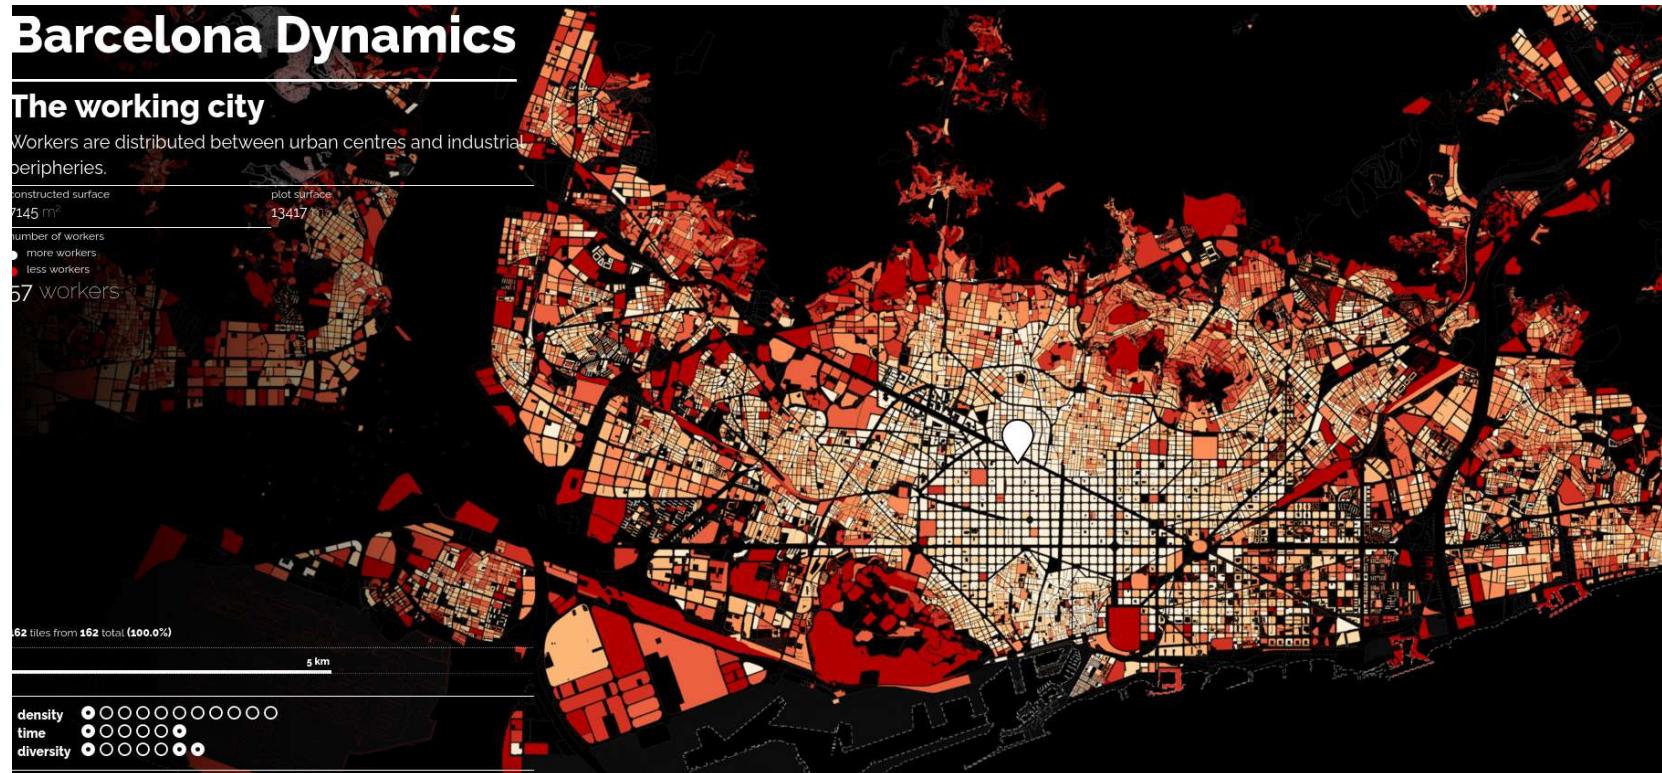

- LAST DATA RECEIVED: OCTOBER**
- lux**: 0 lux
- noise**: 48.7 dBA
- air temperature**: 20.1 °C
- humidity**: 57.2 %
- barometric pressure**: 93.8 kPa
- PM 2.5**: 0 ug/m³
- PM 10**: 0 ug/m³

At the bottom, a detailed graph for 'LIGHT' shows a yellow line fluctuating between 400 and 800 lux over time. A tooltip for 'light' provides a definition: "Lux is a measure of how much light is spread over a given area. A full moon clear night is around 1 lux, inside an office building you usually have 400 lux and a bright day can be more than 20000 lux. More info".

The image shows the physical hardware of the Smart Citizen Urban Sensor Board 2.0. It is a blue, rounded rectangular device with a clear plastic cover that has been removed to reveal the internal electronic components. These include a central microcontroller, various sensors, and connecting wires. The device is labeled with the 'SMART CITIZEN' logo and 'URBAN SENSOR BOARD 2.0'.
